

CAUTION FIBRE OPTIC CABLE BELOW WARNING TAPE

The Caution Fibre Optic Cable Below Warning Tape is a durable underground detection and safety solution designed to protect fibre optic infrastructure during excavation works. Installed above buried fibre optic cables, this green warning tape provides a clear, highly visible alert to contractors and engineers, reducing the risk of accidental cable damage and service disruption.

Manufactured from robust polyethylene (PE) or PE+PET laminate, the tape is suitable for telecom duct routes, access networks, and backbone fibre installations. Its standard 150mm width and 365m roll length make it ideal for efficient deployment across long trench runs.

FEATURES & BENEFITS

- Clearly printed warning: "Caution Fibre Optic Cable Below"
- High-visibility green colour for rapid underground identification
- Designed specifically for fibre optic and telecom cable protection
- Available in multiple thickness options for different ground conditions
- Supplied in long 365m rolls to minimise jointing and installation time
- Resistant to moisture, soil chemicals, and ground movement

APPLICATIONS

- Fibre-to-the-home (FTTH) and fibre-to-the-premises (FTTP) networks
- Telecom access and backbone cable routes
- Data centre and enterprise fibre installations
- Utility and shared service trenches
- Road, rail, and civil engineering projects involving fibre

TECHNICAL SPECIFICATION

- **Product Type:** Underground warning tape
- **Printed Text:** Caution Fibre Optic Cable Below
- **Material:** PE or PE + PET
- **Colour:** Green
- **Width:** 150mm
- **Roll Length:** 365m
- **Installation:** Laid above buried fibre optic cables
